# Recruitment Partners

I²IT Students get ready for on-campus interviews

At any IT and business school, placement logistics are a reflection of the technical and managerial talent honed by students during their Masters programs. At I²IT, the placement is not an event; it is an on-going process. It begins with counseling early in the program, continues with constant exposure to the industry and its dynamics by way of projects and assignments and culminates in the final placement of students. The placement session begins with pre-placement talks. The objective of this preliminary talk is to enable students to understand various company philosophies, ethics, expectations and operations, job profile and the package offered. Students are also briefed about the nature of orientation or training programs that they would be expected to undergo if selected. Campus placement and project internship processes at I²IT are conduced around the year, wherein organizations form all over India are invited to the campus. This is solely for project internships and final placements. I²IT encourages and nurtures independent thinking and many graduates have successfully chosen the entrepreneurial road and established their own tech-corporations. I²IT has an excellent track record of on-campus placements.

I²IT Alumni are now working with the market leaders in India and overseas. Some of I²IT's illustrious Placements and Internship Partners are:

Accenture India
